**DETAILED ACTION**

1. Applicant's election without traverse of Group II in Paper No. 11 is acknowledged.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 33-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Fraser et al. (AN).

Fraser et al. disclose melatonin receptor mRNA from ovine pars tuberalis expressed in the *Xenopus* oocytes (page 242, abstract and paragraph bridging left and right columns). The activation of melatonin receptor with melatonin activates the G-protein signal transduction system and is consistent with the receptor belonging to the G-protein receptor family (page 243, right column, bottom paragraph). Fraser et al. teach that further investigation is required to elucidate the reasons for the apparent lack of fidelity in the G-protein coupling seen in *Xenopus* oocytes (page 244, right column, last sentence).

4. No claims are allowed.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Pak, whose telephone number is (703) 305-7038. The examiner can normally be reached on Monday through Friday from 9:30 AM to 6:00 PM.
